Project Title

HARRY STYLES — GLOBAL TOUR MARKET INTELLIGENCE ANALYSIS

Project Objective

To analyse cross-market performance patterns from Love On Tour and benchmark structural positioning of the 2026 Together Together Tour using SQL, Python, Excel, and advanced visual storytelling.

Core Business Question

How do different global markets perform structurally (arena vs stadium, region vs region), and where is revenue concentration and pricing power strongest?

Datasets Used

- Love On Tour historical gross and ticket data
- Together Together 2026 tour structure (venues, capacity, shows)
- Revenue per seat calculations
- Gross per show benchmarking
- Market concentration analysis

Technical Stack

- Python (Pandas, Matplotlib, Pillow)
- SQL (SQLite queries)
- Plotly (interactive dashboards)
- Excel (initial modelling)
- ReportLab (documentation export)
- Optional: FFmpeg for animation

Key Analytics Performed

- Arena vs Stadium performance comparison
- Regional revenue benchmarking (US, Europe, LATAM, Australia)
- Revenue per seat distribution analysis
- Gross per show comparison
- Revenue concentration ranking by city
- Market dominance share calculation
- Scenario sensitivity (+10% pricing / NYC risk test)

Creative Visual Strategy

- Netflix-style cinematic title cards
- Spotify Wrapped typography hierarchy
- Neon revenue counters
- Histogram overlays
- World map blending
- Glassmorphism analytics panels
- 3D revenue bar illusion
- Spotlight vignette lighting
- LinkedIn 4:5 vertical optimization

Major Insights Discovered

- Stadium strategy drives scale; arena strategy drives pricing power
- Revenue concentration is heavily anchored in NYC & London
- US shows highest revenue per seat (pricing power)
- Europe and Australia leverage capacity scale
- LATAM demonstrates volume-driven economics
- Tour revenue highly price-leveraged (10% price increase = ~10% revenue lift)

Strategic Positioning Statement

This project demonstrates end-to-end marketing analytics capability: data cleaning, SQL modelling, revenue benchmarking, scenario simulation, and executive-grade visual storytelling tailored for recruiter-facing portfolio impact.

Portfolio Value

- Demonstrates business framing, not just coding
- Combines analytics + strategy + creative direction
- Showcases SQL, Python, visualization, and storytelling
- Designed for LinkedIn engagement and recruiter visibility
